Pros and Cons

Bootstrap
- Pros:
  - Less cross browser bugs
  - Reliable framework which supports a majority of browsers and CSS compatibility fixes
  - Its lightweight and customizable
  - Its responsive to structures and styles
  - Numerous JavaScript plugins which use the jQuery
  - Great documentation and community support
  - Has a good grid system

- Cons:
  - Requires a lot of style overrides or rewrite files which can lead to a lot of time wasted on designing and coding the website.
  - One has to go the extra mile whilst creating the design or else all the websites will look the same if there isn't a lot of customization.
  - The styles are longwinded which may lead to numerous outputs in HTML which isn't required.
  - Non-compliant HTML
  - JavaScript is secured to jQuery and is one of the most frequent libraries where most of the plugins unused.

Media Queries
- Pros:
  - One can aid the most important content for smaller resolutions like iPhones which will eliminate clutter.
  - High chances of the website leading to more conversions.
  - A huge group of people using mobile devices will make more sense to have a responsive website.
- Cons:
  - Takes longer to code responsive websites and is relatively expensive.
  - Non-tech clients might not be happy as to why their website doesn't show the same way like on their desktop.
  - Fixed websites don't show up relatively well on smaller devices.
